

Notes2A4 sample slide 1 / 4

$I = I_{\max} e^{(-Rt/L)}$ at $t = 0$, $I = I_{\max}$

$L \, di/dt = -iR$ integrate 0 to t

current decays exponentially — time constant L/R

- rule 1: $v = iR$, $p = v_i$ (page 1)
- rule 2: $v = iR$, $p = v_i$ (page 1)
- rule 3: $v = iR$, $p = v_i$ (page 1)
- rule 4: $v = iR$, $p = v_i$ (page 1)
- rule 5: $v = iR$, $p = v_i$ (page 1)

Notes2A4 sample slide 2 / 4

$I = I_{\max} e^{(-Rt/L)}$ at $t = 0$, $I = I_{\max}$

$L \, di/dt = -iR$ integrate 0 to t

current decays exponentially — time constant L/R

- rule 1: $v = iR$, $p = v_i$ (page 2)
- rule 2: $v = iR$, $p = v_i$ (page 2)
- rule 3: $v = iR$, $p = v_i$ (page 2)
- rule 4: $v = iR$, $p = v_i$ (page 2)
- rule 5: $v = iR$, $p = v_i$ (page 2)

Notes2A4 sample slide 3 / 4

$I = I_{\max} e^{(-Rt/L)}$ at $t = 0$, $I = I_{\max}$

$L \, di/dt = -iR$ integrate 0 to t

current decays exponentially — time constant L/R

- rule 1: $v = iR$, $p = v_i$ (page 3)
- rule 2: $v = iR$, $p = v_i$ (page 3)
- rule 3: $v = iR$, $p = v_i$ (page 3)
- rule 4: $v = iR$, $p = v_i$ (page 3)
- rule 5: $v = iR$, $p = v_i$ (page 3)

Notes2A4 sample slide 4 / 4

$I = I_{\max} e^{(-Rt/L)}$ at $t = 0$, $I = I_{\max}$

$L \, di/dt = -iR$ integrate 0 to t

current decays exponentially — time constant L/R

- rule 1: $v = iR$, $p = v_i$ (page 4)
- rule 2: $v = iR$, $p = v_i$ (page 4)
- rule 3: $v = iR$, $p = v_i$ (page 4)
- rule 4: $v = iR$, $p = v_i$ (page 4)
- rule 5: $v = iR$, $p = v_i$ (page 4)
